

Cogito Parking Module

Cogito parking control module enables companies to manage their parking needs in an easy and cost effective manner. Restricting access to particular parking lots on schedule, locking down lots or making them accessible without restriction are part and parcel of our true parking control module.

Cogito input/output linker rules allow parking control via programmable rules that can run independently of the server software.

Cogito parking control module makes it easy to show parking full signs as well automatically deny cars access when the parking lot is full.

Part Number to use when ordering: AV-COG-PRK
