

## Hosted access control service

Software-as-a-service (SaaS) based access control system helps you to run your business more efficiently by lowering your total cost of ownership (TOC).

## Why do I need a hosted access control system?

Software as a Service, often also referred to as “Cloud”, is a deployment model in which software and its associated data are hosted externally at secure and scalable data centers. SaaS,

- Enables you to access your system online through a secure web portal – add/delete cards, monitor your system or run configuration or event history reports. No software to install, no dedicated computers needed.
- Provides redundancy and disaster recovery. Geographically dispersed data centers provide redundancy and disaster recovery, also handling regular data backups.
- Lowers your overall total cost of ownership.
- Eliminate services calls for computer maintenance, software upgrade, support or training.
- Allows you to try a system at no risk before buying.

# Hosted Access Control Service

## How it works:

## Key Features

### Powerful, Secure, and Scalable

Our system handles single door installations to installations consisting of 1000s of doors with equal ease. All communications between different components of the systems is encrypted.

### Advanced Reporting

A large number of event, database and audit reports are included in the system. Reports may be exported to various formats such as PDF or Excel. Custom report designer may be used to design custom reports.

### Role-based Security

Assigning security privileges to a role rather than a user makes application security much easier.

### Database Partitioning

As different administrators may manage data such as door records, cardholder records and events, the system data can be partitioned to provide discrete access to each area.

### Active Directory Integration

Through this feature you can integrate your security processes and IP processes.
